TIBCO™ Access Point

TIBCO ENTERPRISE MESSAGE SERVICE

PRODUCT OVERVIEW

TIBCO Enterprise Message Service™ is a standards-based enterprise messaging platform that brings together different IT assets and communications technologies on a common real-time backbone and manages the real-time flow of information. TIBCO Enterprise Message Service reduces the cost, complexity and time required to integrate disparate systems by providing native support for multiple message protocols and technologies – including the Java Message Service (JMS) standard using with Java and J2EE, Microsoft .NET, TIBCO Rendezvous® and TIBCO SmartSockets™, and C and COBOL on the mainframe. It also delivers proven performance, scalability and reliability.

License Type: Developer Evaluation
License Term: 90 days

Zarządzanie serwerem Tibco

Programem **tibemsadmin** łączymy się do serwera Tibco. Można wykonać polecenie "show queues" i obserwować dostępne kolejki JMS.

```
D:\development\tools\tibco\ems\8.3\bin\tibemsadmin.exe
Error: not connected, use 'connect' first.
> connect

Chcę przeglądać wiadomości na podstawie identyfikatora, dlatego muszę włączyć "tracking" wiadomości na podstawie ID. Przed włączeniem serwera JMS muszę włączyć poniższe opcje w pliku tibemsd.conf

```
#####
# Message tracking by message ID and correlation ID.
# Both are disabled by default and should be enabled if required.
#####

track_message_ids      = enabled
track_correlation_ids  = enabled

#####
